

The
Elvarex[®] Portfolio
for the Treatment
of **Lymphedema**
and **Chronic Edema**

JOBST[®] Elvarex[®]
Custom-fit, flat-knit compression garments

Why JOBST®?

JOBST is the **#1 physician recommended brand** of medical compression legwear for the prevention, treatment, and management of venous and lymphatic conditions. The brand was founded by Conrad Jobst, mechanical engineer and industry pioneer, in 1950.

Innovation is at the heart of our product excellence. Product development efforts are directed towards delivering the highest quality product with the highest medical efficacy.

Our **product experts**, called Medical Education Advisors, and our devoted team of Sales Professionals, provide customized education and solutions for both fitters and therapists.

Knowledgeable customer and product service representatives provide a personalized touch to problem solving.

Quick and efficient processing from order entry to garment delivery. Elvarex® garments are delivered in an average of 5 business days. Two free of charge replacements on the initial order will be allotted within 45 days of confirmed delivery of parcel carrier for reasons other than manufacturing or material flaws.

The JOBST® Elvarex® Family

Each patient has different requirements and preferences which can be accommodated quickly and easily with the JOBST® Elvarex® custom-fit range. Custom-fit garments are manufactured to each patient's individual measurements so even patients with limb shape distortion are better treated as garments do not curl, twist, or cut into the skin.

Benefits of Flat-Knit Garments

The number of stitches can be varied to achieve virtually any desired shape to accommodate almost any level of limb distortion, providing:

- Exact anatomical fit for each individual patient
- High breathability to enhance patient comfort
- Provides optimal compression profile, even when the edema is extreme
- Fabric does not dig in at skin folds
- High ratio of working pressure to resting pressure

JOBST® Elvarex®

The gold standard in custom, flat-knit compression garments

- Flat-knit structure bridges skin folds instead of working into them
- Latex core provides superior containment and allows garment to return to original shape for extended wear
- Excellent breathability for comfort and patient compliance
- Upper and lower limb garments for the treatment of moderate to severe lymphedema and chronic edema
- Provides SPF UV 80 protection

Compression Classes

Upper Extremities

CCL 1 = 15-21 mmHg*

CCL 2 = 23-32 mmHg*

CCL 2 Forte = 23-32 mmHg*

Lower Extremities

CCL 1 = 18-21 mmHg*

CCL 2 = 23-32 mmHg*

CCL 3 = 34-46 mmHg*

CCL 3 Forte = 34-46 mmHg*

CCL 4 = 49-70 mmHg*

CCL 4 Super = 60-90 mmHg*

* CAUTION: These products contains natural rubber latex which may cause allergic reactions.

JOBST® Elvarex® Soft

Gentle and latex-free

- Upper and lower limb garments for the treatment of mild to moderate lymphatic and venous conditions
- Designed for those patients with dry, sensitive or fragile skin
- Provides a more comfortable choice for patients
- Soft textured yarns create an extremely smooth fabric surface to aid ease of donning
- Combining skin-protecting softness and excellent breathability

JOBST® Elvarex® and JOBST® Elvarex® Soft Options

Functional Zone for greater wearing comfort

Give your patients more freedom! Additional Functional Zones can be knitted into the garments to give greater **mobility** and **support** around joints, according to the patient's needs.

The patented Functional Zone is a uniquely knitted two-layer construction created from selected soft and particularly elastic yarns. These reduce cutting in and wrinkling to provide the necessary **comfort** as well as retaining **compression**.

Functional zones available for:

Bias Top End

Elbow Comfort

Pressure Panty

Top Comfort

Knee Comfort

T-Heel

Slant Foot

Top Bands

Stage 0	Stage 1	Stage 2	Stage 3
<p>Latent: A subclinical state where swelling is not evident despite impaired lymph transport. This stage may exist for months or years before edema becomes evident.</p>	<p>Mild: This represents early onset of the condition where there is an accumulation of tissue fluid that subsides with limb elevation. This edema may be pitting at this stage.</p>	<p>Moderate: Limb elevation alone rarely reduces swelling and pitting is manifest. There may or may not be pitting as tissue fibrosis is more evident.</p>	<p>Severe: The tissue is hard (fibrotic) and pitting is absent. Skin changes such as thickening, hyperpigmentation, increased skin folds, fat deposits and warty overgrowths develop.</p>
	<p>Welt with  SoftFit technology</p>		
<p>Knitted welt </p>		<p>Silicone band </p>	

Staging according to International Society of Lymphology (ISL). Each band is available and suitable for all stages. The table serves only as a recommendation.

Seeking more information about vein diseases, lymphedema, and our products?

The JOBST® Compression Institute serves as a resource for healthcare providers and clinicians seeking further education as well as product information and resources. The JOBST® Compression Institute houses product literature, studies, order forms, as well as donning and measuring videos. Additionally, the JOBST® Compression Institute offers a variety of nationwide workshops and continuing education classes to train you on JOBST® products and proper measuring and fitting techniques. Up to 9 hours of CEU credits available. Register at www.jobstcompressioninstitute.com.

Please refer to the product label and / or package insert for full instructions on the safe use of these products.
